

METHOD OF MAKING POLARIZABLE ELECTRODE  
FOR ELECTRIC DOUBLE LAYER CAPACITOR  
ABSTRACT OF THE DISCLOSURE

5       A method of making a polarizable electrode for an electric  
double layer capacitor, includes adding a binder assistant to  
a binder so that the binder is swollen and mixing a carbonaceous  
powder, a conductive assistant and thereafter the swollen binder,  
thereby obtaining a material mixture, kneading the material  
10 mixture into a primary forming material, forming the primary  
forming material into a secondary forming material, and rolling  
the secondary forming material into a sheet shape.
